

1150 West Improvements Survey Notice

Hurricane City is in the process of evaluating alignment options for a new overhead powerline along the master planned 1150 West corridor. This new powerline will provide a much needed redundant power source to service the area to ensure effective service for years to come and provide for the right-of-way required for a North South connection between existing transportation corridors.

As part of the initial phase of this project, the area from 400 South to 3000 South needs to be surveyed to locate structures, existing improvements and other information pertinent to the design.

Survey crews will be in the area the week of June 20, 2022. They will walk the area and use GPS guided equipment to get the necessary data.

We appreciate your cooperation in allowing us to access your property.

A public Open House will be held later this summer to educate citizens on the preferred alternative placement of the future power line. Additional notification will be provided to property owners prior to the meeting.

A Hurricane City Public Works improvement project.
