

Old Highway 91 - Improvements

Starting Monday, March 21, 2022, Hurricane City will begin improvements to the Old Hwy 91 Corridor from the intersection of SR-9 and continuing north for approximately 2.4 miles.

During the first section of the project crews will pulverize and remove the existing asphalt from the SR-9 intersection to the first entrance into the Walmart Distribution Center. This activity will be done by removing one side of the road and shifting traffic to the other side, rebuilding the road surface and then shifting traffic onto the new surface while rehabilitation takes place on the other half of the road.

The second phase will remove the existing asphalt surface from the Walmart Distribution entrance to the end of the project limits. (See map above) This phase will be done in thirds with crews starting on the northbound lane, moving to the southbound lane and then completing the upgrade in the center lane. Traffic shifts will occur throughout this improvement project.

There will be no on-street parking along Old Highway 91.

The project is estimated to be completed by the first of July 2022.

Your patience is appreciated.
